## **AMENDMENTS TO THE SPECIFICATION:**

Please replace the paragraph under the heading "Cross-Reference To Related Applications" added by the Preliminary Amendment filed with this divisional application on March 1, 2004, with the following amended paragraph:

This application is a division of eo-pending U.S. Application No. 10/019,508, filed on December 21, 2001, now abandoned, and entitled, "Side-Emission type Semiconductor Light-Emitting Device and Manufacturing Method Thereof", the disclosure of which is incorporated herein by reference.

## **AMENDMENTS TO THE CLAIMS:**

- 1. (Cancelled)
- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Currently Amended) A side-emission type semiconductor light-emitting device, comprising:
  - a substrate formed with an electrode;
  - an LED chip bonded onto said substrate;
  - a transparent or translucent resin with which said LED chip is molded; and
  - a reflector which reflects a light emitted from said LED chip, wherein
- said transparent or translucent resin has a convex portion, and said reflector has a <a href="throughole">throughole</a> eoncave portion to be fitted into said convex portion.
- 5. (Currently Amended) A side-emission type semiconductor light-emitting device according to claim 4, comprising:
  - a substrate formed with an electrode;

an LED chip bonded onto said substrate;

a transparent or translucent resin with which said LED chip is molded; and
a reflector which reflects a light emitted from said LED chip, wherein
said transparent or translucent resin has a convex portion, and said reflector has a
concave portion to be fitted into said convex portion, and wherein

said concave portion is a throughole having a diameter which becomes larger from one main surface to other main surface of said reflector.

- 6. (Original) A side-emission type semiconductor light-emitting device according to claim 5, wherein said one main surface is a surface brought into contact with said transparent or translucent resin, and said other main surface is a surface exposed to outside.
- 7. (Currently Amended) A side-emission type semiconductor light-emitting device according to claim 4, wherein said LED chip has a bonding wire extending from a top surface, and said throughole encave portion is formed directly above said LED chip.
  - 8. (Cancelled)
  - 9. (Cancelled)
  - 10. (Cancelled)
  - 11. (Cancelled)
  - 12. (Cancelled)
  - 13. (Cancelled)

Applicant: Takehiro Fukii Serial No.: 10/792,200 Filing Date: March 1, 2004 Examiner: Bradley Smith

- 14. (Previously Added) A side-emission type semiconductor light-emitting device according to claim 5, wherein said LED chip has a bonding wire extending from a top surface, and said concave portion is formed directly above said LED chip.
- 15. (Previously Added) A side-emission type semiconductor light-emitting device according to claim 6, wherein said LED chip has a bonding wire extending from a top surface, and said concave portion is formed directly above said LED chip.
